As presented the concept. Here, the thermal plasma noise on the local plasma frequency can be essentially increased by. Thermal anomalies and latent heat flux anomalies will appear after gas discharge. We can consider conductivity changes in the air as an option in the electric field model. Then the GEC conception is presented shortly with main accent put on ionization processes which play key role in Ionospheric Precursors of Earthquakes complex chain of physical and chemical interactions changing the electric properties of the planetary boundary layer of atmosphere. In this case the preparation zone is estimated as:.

The first publications dealing with ionospheric parameter variations. At higher frequencies from the Colima station are broken.
