Common engineering focuses revolve around water supply,
production, sanitation, cleaning up of pollution and waste
sites, restoring natural habitats. As technology progresses in
architecture and design theories and as examples are built and
tested, architects will soon be able to create not only
passive, null-emission buildings, but rather be able to
Redesigning the Planet: Global Ecological Design the entire
power system into the building design. The principle that all
directions of progress run out, ending with diminishing
returns, is evident in the typical 'S' curve of the technology
life cycle and in the useful life of any system as discussed
in industrial ecology and life cycle assessment.
