This tutorial chapter is followed by a reference section that documents the Canvas API in complete. Each time the path crosses the ray counterclockwise, subtract one from the count. To convert degrees to radians, multiply by $\frac{\pi}{180}$. Once you have created a CanvasGradient object, use `addColorStop` to specify what colors should appear at what positions within the gradient. The Definitive Guide," into one easy-to-use cheat-sheet.

If you set these properties appropriately, any line, area, text, or image you pixel you draw will have its alpha value multiplied by `globalAlpha`.
